Air Visual

Predmet: Request for response

Dear Sir or Madam,

You have posted information on the most polluted cities in the world on the web site. The data disturbed citizens of Gračanica. They are addressed to the local government and they are looking for additional information. The local government does not have the required data and knows nothing about measuring air pollution in 2018.

In the name of Gračanica Municipality, I ask answers to the following questions:

- **How many air quality control stations are placed in Gračanica?**
- **At what locations they are located?**
- **By which an authorized institution from Bosnia and Herzegovina cooperates?**
- **Which standards are used to collect and process data?**
- **Have data published been collected and processed in accordance with EU standards?**

I look forward to hearing from you.

Head of service for physical planning,
geodetic and property affairs at Gračanica
Municipality
